

URGENT — LABELLING DISCREPANCY REPORT

Goods-in inspection finding — delivery hold applied

Complaint Source	Distributor
Customer Name	Kingsway Wholesale Distribution Ltd
Contact	goodsin@kingswaywholesale.co.uk
Product Name	Warfarin Sodium Tablets
Strength / Grade	3 mg
Batch No	WAR-2208-F
Mfg Date	21/01/2026
Expiry Date	20/01/2028
Quantity Affected	2400 tablets
Complaint Date	11/07/2026

NATURE OF COMPLAINT

Description: During routine goods-in verification our inspector identified that approximately 80 cartons within this delivery bear an outer carton label stating a strength of 5 mg, while the blister foil inside each carton and the carton end-flap overprint both correctly state 3 mg. The 2D barcode on the mislabelled cartons resolves to the 5 mg product code in our warehouse management system.

This is a wrong-strength labelling defect on an anticoagulant with a narrow therapeutic index. Had the discrepancy not been intercepted at goods-in, these units would have been picked, shipped and dispensed as 5 mg, representing a 67 percent overdose relative to the tablets actually present. For a warfarin patient this carries a credible risk of serious bleeding events.

The entire delivery has been placed on administrative hold and physically segregated in our quarantine bay. We require written confirmation of the full scope of the affected batch, including whether any units from this packaging run were released to other customers, before we will accept any further stock of this product.

Reported by: Sandra Iqbal, Goods-In Supervisor, Kingsway Wholesale Distribution Ltd — countersigned by Responsible Person.
