

FIELD ALERT — ADVERSE REACTION REPORT

Reported via territory manager — expedited handling requested

Complaint Source	Sales Representative
Customer Name	Northfield Regional Medical Centre
Contact	a.castellano@northfieldrmc.health
Product Name	Iohexol Contrast Injection
Strength / Grade	350 mg I/mL, 100 mL bottle
Batch No	IOH-9075-C
Mfg Date	05/02/2026
Expiry Date	04/02/2028
Quantity Affected	22 bottles
Complaint Date	23/07/2026

EVENT NARRATIVE

Description: Five patients undergoing contrast-enhanced imaging on 21 and 22 July developed acute hypersensitivity reactions within fifteen minutes of administration from bottles drawn from this batch. Presentations included widespread urticarial rash in all five, facial and periorbital swelling in three, and bronchospasm with oxygen desaturation in one. The patient with bronchospasm, a 54-year-old female with no documented contrast allergy, was treated with intramuscular adrenaline and admitted overnight for monitoring.

The radiology department notes that the observed reaction rate for these two days is markedly above the historical baseline for this product at this site, and that all five affected patients received contrast from the same batch. Two patients imaged on the same days using stock from a different batch experienced no reaction.

On visual inspection the solution in the remaining bottles is clear and colourless with no visible particulate, and all bottles are within expiry and correctly labelled. The department has suspended use of this batch and quarantined the remaining 22 bottles pending investigation. A possible endotoxin or leachable-related aetiology has been raised by the consultant radiologist and should be evaluated.

Reported by: Alessandro Castellano, Territory Manager, on behalf of Dr H.Ravindran, Consultant Radiologist.
